

# Authentication [POST]

These API endpoints require HTTP Token Authentication. The auth token must be sent in the HTTP headers in the following form:

Authorization: Token {auth\_token} For example, if your auth token is eeN3EiwuShowaih6ceic5ohchahvu4quaeg9eing1, you MUST send the header Authorization: Token eeN3EiwuShowaih6ceic5ohchahvu4quaeg9eing1 in all your requests to these endpoints.

To obtain a token, the API endpoint POST /accounts/get\_auth\_token/ is provided.
